Storm Exploration Amends Toogood Agreement

Vancouver, B.C., December 27, 2023 – Storm Exploration Inc. (TSX-V: STRM) (“Storm” or the “Company”) today announced that it has amended the terms of the Toogood Option Agreement (the “Toogood Agreement”) with Prospector Metals Corp. (“Prospector”) as previously announced on September 25, 2023 ([see news release here](#)).

Toogood Agreement Amendment

Under the terms of the amended Toogood Agreement, Storm may exercise the Second Option by paying Prospector \$12,000,000 in any combination of cash and Storm shares, as determined by Storm in its sole discretion, subject to the following conditions:

- on the exercise of the Second Option, Prospector shall not own or control more than 9.9% of the then issued shares of Storm;
- on the exercise of the Second Option, no more than 25,000,000 Storm Shares shall have been issued to Prospector under the Property Option Agreement, as amended.

Toogood Gold Project Highlights

- District scale land package covering 118 sq-km and 28 km of strike length along a regional structural corridor that has proven to be prospective for gold deposits,
- Includes the drill-confirmed high-grade Quinlan Zone:
 - Assay results from maiden drill program (2022) include: **23.90 g/t Au over 3.65 m, 18.27 g/t Au over 4.25 m and 9.40 g/t over 3.18 m.**
 - High-grade gold mineralization is hosted within a felsic dyke and has been confirmed for 200 m along strike, 120 m down-dip and remains open in all directions.
- Road accessible and fully permitted for drilling,
- Numerous additional occurrences with visible gold identified across the property.

Toogood Gold Project Overview

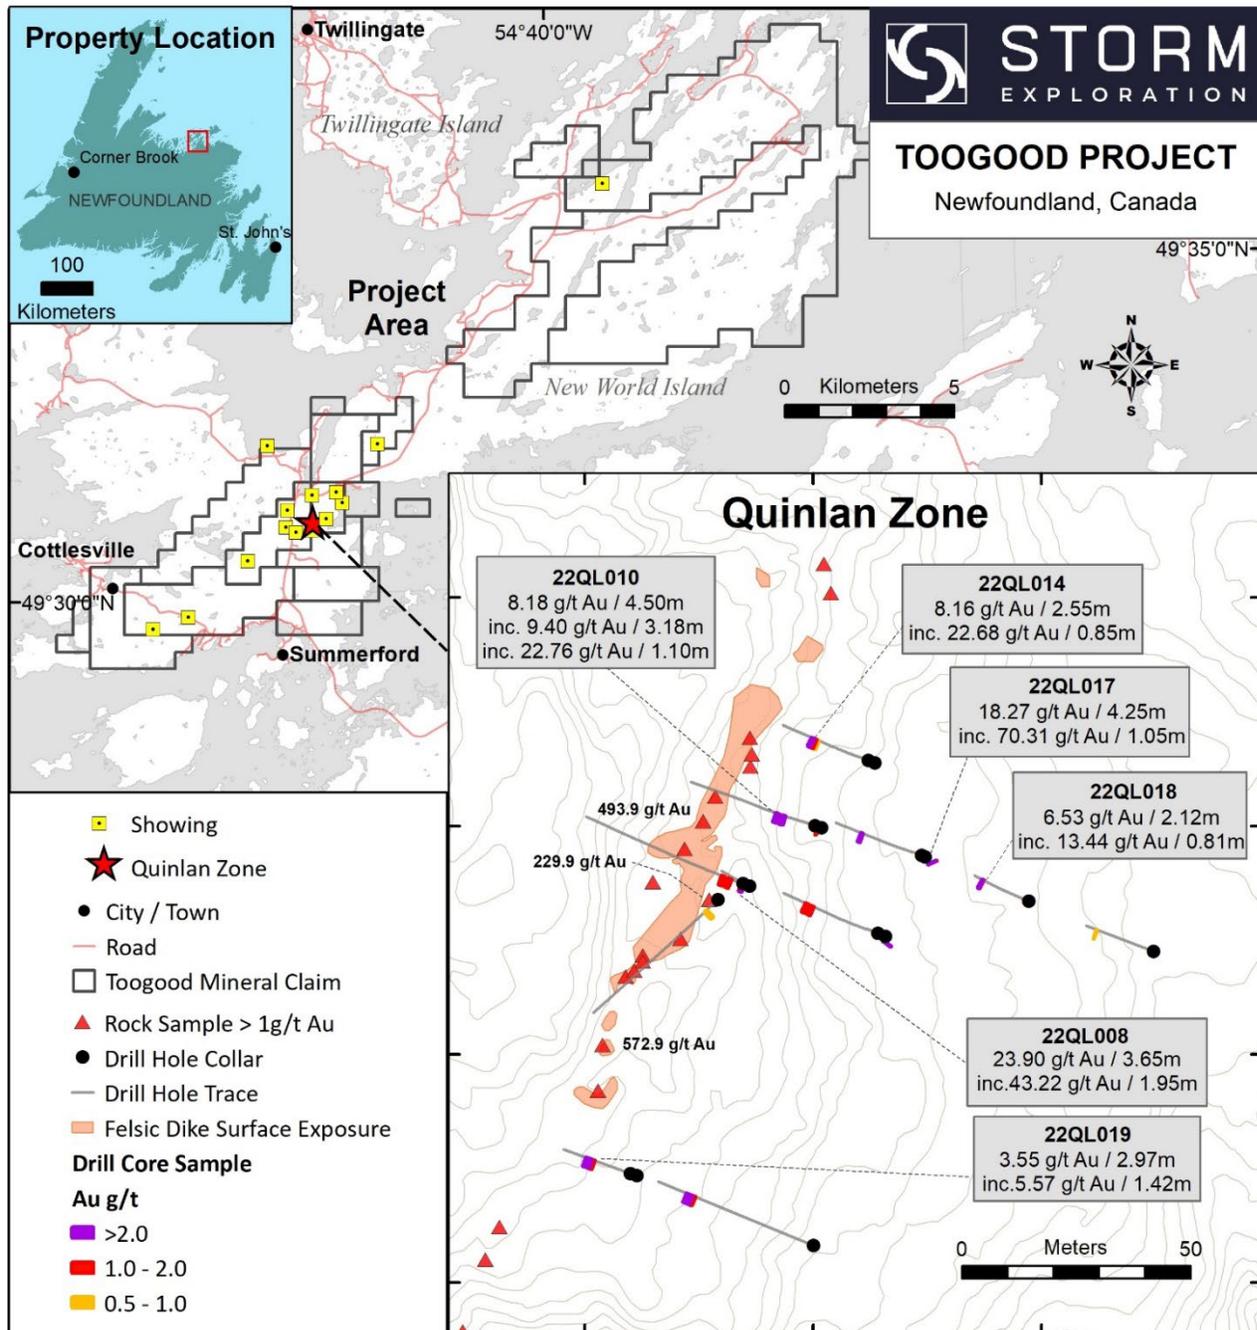

The Toogood Gold Project is located on New World Island, approximately 65 km north of Gander, Newfoundland. The property is road accessible and lies at the northeast extent of the Exploits Subzone, a major structural corridor in central Newfoundland. The Exploits Subzone trends 200km northeast / southwest across the island of Newfoundland, and hosts many of the significant gold deposits in the province, including Marathon Gold’s Valentine Project which has an established resource of 2.7 Moz at 1.62 g/t Au (Reserve) and 3.96 Moz Au at 1.90 g/t (M+I).

Gold mineralization at Toogood is hosted by a suite of Devonian felsic dykes which crosscut the property, emplaced in the latter stages of a complex tectonic history. Gold

mineralization is associated with arsenopyrite, pyrite, trace chalcopyrite, and fine-grained native gold and is concentrated along brittle fault intersections.

Numerous gold occurrences have been identified on the property with the Quinlan Prospect being the most advanced. Drilling conducted by Prospector in 2022 confirmed high-grade gold at the prospect with a 857 m drill program. Drilling has demonstrated that the gold bearing dykes have a remarkably consistent dip and thickness. Mineralization has been confirmed along a 200m strike and 120m down-dip and remains open in all directions.

Next Steps

Storm plans to take a two-pronged approach to exploration on the Toogood project.

Drilling: The primary focus will be to extend gold mineralization at the Quinlan Prospect which is permitted for additional drilling and targets have been identified by Prospector.

Target Generation: Simultaneously, the Company will conduct a prospecting and soil sampling program over the numerous showings on the property with the goal of developing a pipeline of compelling drill targets.
