NEWS RELEASE

NEWS RELEASE

WestKam Gold Provides Update on Acquisition of McConnell Property in British Columbia

Vancouver, Canada, December 11, 2023 – WestKam Gold Corp. (TSX-V:WKG)(the “Company” or “WestKam”) is pleased to provide an update on the acquisition of the McConnell Property in British Columbia. The Company continues to advance the transaction to completion by meeting all TSX Venture Exchange requirements and vendor conditions precedent.

The Company previously announced that it had signed a definitive agreement with an arm’s length party, GGL Resources Corp. (see original news release dated July 24, 2023), to purchase 5 mineral claims commonly referred to as the McConnell property, located in northwestern British Columbia. The Company will acquire a 100% interest in the McConnell property by issuing to the vendor a number of common shares that will result in the vendor holding a 19.99% interest in the Company as of the closing date after giving effect to the issuance of these shares. When issued, the shares will be subject to a statutory 4 month and a day hold period from the closing date under applicable securities laws. The Company intends to complete a concurrent private placement in connection with and as a condition of the transaction. The vendor will also retain a 2% net smelter return royalty on the McConnell property. Closing will occur upon all conditions precedent being met, including, amongst other things, receipt of TSX Venture Exchange approval.

The McConnell property comprises 8,700 hectares in the Golden Horseshoe region of British Columbia. The road-accessible property is located 22 km southeast of the past-producing Kemess Copper-Gold Mine in close proximity to a hydro grid. The property has active exploration and drill permits, and has had over \$4 million in prior exploration work. Potential copper/gold porphyry style systems have been identified along with shear hosted, gold mineralization. Satellite remote sensing structural interpretation and data synthesis has confirmed the gold and copper zones as high priority targets for further exploration. An additional 5 high priority and 11 secondary priority areas have been identified using the same criteria. Future areas of investigation are spread along the entire property and are coincident with the major geological faults.

Lorne Warner is a qualified person as defined by National Instrument 43-101 and has reviewed and approved the scientific and technical disclosure in this news release.
