

Press-release 17-06

THIS NEWS RELEASE IS NOT FOR DISTRIBUTION TO U.S. NEWSWIRE SERVICES FOR DISSEMINATION IN THE UNITED STATES

GESPEG ACQUIRES NEW PROJECT IN THE GASPÉ PENINSULA

Saskatoon, Saskatchewan, December 19th, 2017 - GESPEG COPPER RESOURCES INC. (TSX-V:GCR) (the “**Company**” or “**Gespeg**”) announces that it has entered into a purchase agreement (the “**Agreement**”) with an arm's length party (the “**Vendor**”), to acquire a 100% undivided interest to 3 mineral claims on the Southern portion of the Gaspé Peninsula, near the Municipality of Port Daniel. The 3 claims will be part of a known project called Lac Arsenault in addition to the 6 claims that are already part of the company.

Past work has proven that the Lac Arsenault Prospect hosts 5 major vein systems, the Baker vein, the Mersereau vein, the Line 4 W vein, the Marleau vein and the Greek veins and related breccias. Since the original discovery in 1946 of mineralized boulders north of Lac Arsenault, the project area has been explored through prospecting, geophysical surveying, geochemical surveying, mapping, trenching, stripping, diamond drilling and sampling. It appears, as a result of these exploration programs, that the veins are open along strike and at depth. As yet, the sources of numerous mineralized boulders, geochemical Au and Ag anomalies and geophysical conductors remain undefined on the Lac Arsenault Prospect. The polymetallic mineralization found to date represents telescoping mineralized veins and breccias caused by an underlain intrusion.

The exploration results obtained between 1973 and 1978, completed by Esso Resources, indicates that the original three veins (the Baker, Mersereau and Line 4W) host historical estimates evaluation of 40,000 tonnes, grading 15.43 g/t Au, 197.00 g/t Ag, 6.6 % Pb and 3.5 % Zn (DV-85-08 page 7). This historical estimate is based on the surface expression of the three veins only. An evaluation of a four vein systems was performed by Peter Smith, Ph.D., in his report of Oct. 1995, indicating that these known vein systems contain his historical estimate evaluation shows 135,510 tons of 0.35 oz/ton Au. Peter J. Hawley re-evaluated these historical estimate in a report dated Feb. 7, 1996, stating that the Arsenault Prospect contains 220,042.52 short tons at 0.307 oz/ton Au.

Under the terms of the Agreement, Gespeg is acquiring the Property by paying the Vendor the following:

1. A payment of 200,000 shares upon TSX Venture Exchange approval.
2. A payment of 300,000 shares to be issued at the first anniversary date of TSX Venture Exchange approval.

Mr. Sylvain Laberge, President and CEO of Gespeg, remarks "We are pleased to add this property to our portfolio. It furthers our mandate of expanding our position in prospective properties in the Gaspé Peninsula region.

The Agreement is subject to the approval of the TSX-Venture Exchange.

Update on Montauban Project

As for our Montauban project we spent the last few months getting all of the required approvals from the relevant parties. These approvals are now in place and the Company is awaiting its certificate of authorization from the Ministry of Energy and Natural Resources to start the tailings evaluation and 43-101 resource calculation.

The Company remains committed to moving the Montauban Project forward in accordance with the terms of the agreement with the vendors.

About Gespeg Copper Resources Inc.: Gespeg is an exploration company with a focus in grossly underexplored regions "Gaspé and Montauban, Québec". With a dedicated management team, the Company's goal is to create shareholder wealth through the discovery of new deposits.

Bernard-Olivier Martel, P. Geo, the Company's Director of Exploration, is a qualified person (as such term is defined in National Instrument 43-101 - *Standards of Disclosure for Mineral Projects*) and has reviewed and approved the technical disclosure contained in this news release.
