ALDEVER FILES NI 43-101 TECHNICAL REPORT FOR THE SCOTIA ZINC PROPERTY

December 14, 2017

Aldever Resources Inc. (ALD—TSXV) (ALDVF—OTCQB) (17G1—Frankfurt) (“Aldever” or the “Company”) is pleased to report that they have filed a National Instrument 43-101 Technical Report (the “Technical Report”) for the Scotia Property, located in the Skeena Mining Division, British Columbia, and which was optioned to Zinc One Resources in January 2017.

The Technical Report discloses an inferred resource estimate of 632,000 tonnes grading 7.6% Zinc, 0.74% Lead, 0.11% Cu, 19.75 g/t Silver and 0.28 g/t Gold (at a NSR US \$74 cut/off) and has been filed on www.sedar.com.

The inferred resource estimate is located in the Albere Zone of the Scotia Property. The data used for the inferred resource estimate was from thirty-nine (39) drill holes totaling 4,144 meters conducted on the Scotia Property, of which seven (7) holes drilled in 1960, seven (7) holes drilled in 1980, four (4) holes drilled in 1981, eleven (11) holes drilled in 1984, and ten (10) holes drilled in 1997. NSR cut-off values were calculated using metal prices of USD \$1.00/lb Zinc, USD \$2.75/lb Cu, USD \$1,200/oz Au, and USD \$18/oz Ag. The NSR calculation assumes underground mining and includes estimated concentrate transportation, smelter treatment and refining charges. The grades for Zinc, Lead, Copper, Silver and Gold were interpolated into each block by ordinary kriging.

Ed Harrington, P. Geo, and Gary Giroux, P. Geo, both Qualified Persons, have reviewed and approved the technical information contained in this news release.
