Engineer Gold Plans Exploration Program with Approved Permit on Engineer Gold Project

June 24, 2025

Vancouver, BC, Canada – Engineer Gold Mines Ltd. (the "Company") (TSX-V: EAU) announce its plans to initiate exploration activities at its flagship Engineer Gold Project, which is a 18,319 hectare mineral claim group located 32 km west of Atlin, BC (See map below).

The past producing epithermal-style Engineer Gold Mine has a rich history of high-grade gold production and the Company aims to build on this legacy by integrating advanced exploration techniques to unlock new opportunities.

The Company has secured a mineral exploration permit that allows for surface exploration activities, including:

- 50 surface drill pads, targeting known mineralized zones and promising new areas,
- 1000 m of trenching, designed to expose near-surface gold-bearing structures,
- 10 km combined trail construction and upgrades, improving access to key targets, and
- The construction of a facility to house the Company's onsite 30 tonnes-per-day pilot mill, for future onsite processing operations.

The Company remains committed to responsible resource development and will provide regular updates on exploration progress and project milestones.

About Engineer Gold Mines Ltd.

The Engineer Gold Project encompasses an area of 18,319 hectares and is currently subdivided into three areas: The Engineer Gold Mine, Tag Property and Wann River.

Recent exploration has identified a small, high-grade historical gold mineral resource at the historical underground Engineer Mine (see Company website for NI-43101 [report](#)), a small gold-silver historical mineral resource on the Tag Property, numerous high-grade vein and shear-hosted bulk-tonnage gold exploration targets and a small, high-grade gold production opportunity. Both the resources are epithermal-style systems with additional epithermal targets evident on the Project, including the Happy Sullivan. Wann River constitutes an orogenic gold target associated with the prolific Llewellyn fault, and has returned significant gold silver results including a grab sample yielding 263 g/t gold and 1350 g/t silver in 2010 from the Lum showing, one of the many local BC Minfile showings.

TAG 025 Historical Mineral Resource:
 250,000 tonnes of 2.97g/t Au (cut) and 12.09g/t Ag (cut), indicated
 400,000 tonnes of 2.98g/t Au (cut) and 9.91 g/t Ag (cut), inferred

Happy Sullivan Historical Bulk Sample:
 11.8 tonne bulk sample from 1933 reported 291.4-325.7g/t Au
 Nomad Resources Ltd (1981) bulk sample reported 161g/t Au and 68.2 g/t Ag

Engineer Mine Historical Inferred Mineral Resource
 41,000 tonnes grading 19.0g/t Au (5g/t Au cut-off) for 25,000 oz Au

2011 Wann River Surface Samples (#):
 #83351: 263g/t Au, 1350g/t Ag, 4.15% Cu, 3.46% Pb;
 #83352: 259g/t Au, 1065g/t Ag, 2.75% Cu, 4.45% Pb, 1.36% Zn;
 #83355: 157g/t Au, 639g/t Ag, 2.91% Cu, 4.75% Pb, 1.94% Zn;
 #83356: 55g/t Au, 381g/t Ag, 2.65% Cu, 1.74% Pb;
 #83358: 52.1g/t Au, 788g/t Ag, 1.79% Cu, 5.76% Pb, 1.04% Zn

Legend

- Engineer Property (18,319ha)
 - TAG Acquisition
 - Most recent Claim Staking
 - Mineral Rights: Other Owner
 - Crown Granted Mineral Claims
 - * general project area named in grey text
- Deposit Type** ['Showing Name (Main Commodity)']
 - Au-quartz veins
 - Epithermal Au-Ag: low sulphidation
 - Flood Basalt-Associated Ni-Cu
 - Intrusion-related Au pyrrhotite veins
 - Polymetallic veins Ag-Pb-Zn+/-Au
 - Stibnite veins and disseminations
 - Unknown Type Au+/-Ag
