Dear Fellow EnGold Shareholder,

After an extended period of low exploration activity, I'm excited to share that EnGold has just recommenced drilling at its 100% owned Lac La Hache Copper Gold Project located in the prolific Quesnel Tough copper/gold porphyry belt in BC.

To stay current with the latest news, please add your name and email address to our mailing list at www.engold.ca

Our initial drill targets include untested areas near our Spout Copper Deposit, where EnGold has outlined significant inferred resources (please see our website for details).

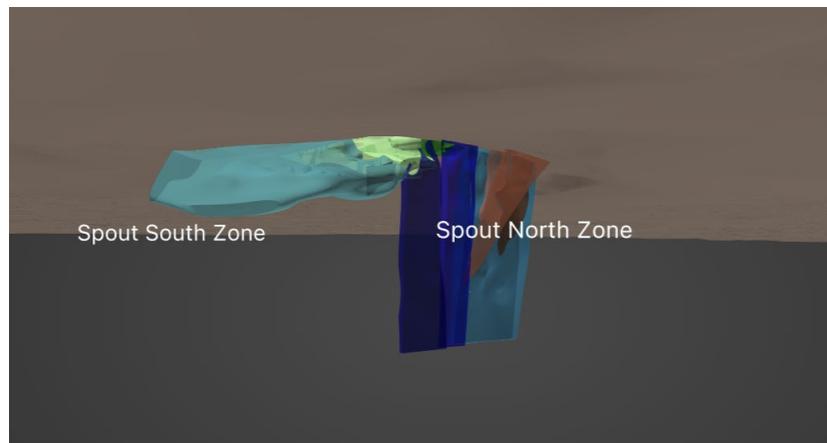

Figure 1. 3D Image of Spout Copper Deposit

EnGold's "Spout Deposit," near Spout Lake, has two sections. The "Spout North" is a more-or-less vertical mineralized zone of high-grade copper. The "Spout South" is a near-surface, flat-lying structure amenable to surface mining methods.

In 2022-2023, EnGold worked with leading Artificial Intelligence group ALS GoldSpot to use existing data to find ways to expand existing deposits and find new targets. Some of those targets are now being tested.

If you have any questions or comments, please feel free to call me anytime at 604-682-2421.

Sincerely,

David H. Brett, MBA
President & CEO
