

TROUBADOUR ANNOUNCES RESULTS OF AGM

Vancouver, British Columbia, Canada - December 17, 2018 - TROUBADOUR RESOURCES INC. (the "Company") (TSX VENTURE: TR) is pleased to announce the results of its Annual General Meeting of shareholders held December 17, 2018, in Vancouver, B.C. The shares represented at the meeting were 17.54% of the issued shares with all motions receiving unanimous support by the Company shareholders including the following:

- Approval of the number of directors at four;
- Election of all four nominees to serve as directors until the next annual meeting of the shareholders of the Company, or until their successors are elected or appointed. Directors elected are Gary Schellenberg, Geoff Schellenberg, Michael Sieb and Paul Chung;
- Approval of the Company's stock option plan; and
- The appointment of Davidson & Company, Chartered Accountants as the Company's external auditors.

The Board of Directors wishes to thank the shareholders for their ongoing and continued support.

About Troubadour Resources Inc.

To date, the Company has been engaged in the acquisition and preliminary exploration of its 100% owned Amarillo Project located approximately 30 kilometres west of the town of Peachland and 71 kilometres northeast of the town of Princeton, in southwestern British Columbia, Canada.

The Amarillo Project consists of seven (7) mineral tenures totalling 4,178 hectares and is situated within the heart of a major mining district. The Amarillo Project exhibits anomalous enrichment in copper, molybdenum and gold with skarn style mineralization highly anomalous in tungsten also present.

The multi-element signature of the Amarillo Project is consistent with a large multi-phase mineralizing system and is acutely similar to some of the neighbouring world-class mining operations; such as the Brenda Cu-Mo-Ag-Au porphyry mine located 10 kilometres to the north that produced 278,000 tonnes of copper, 66,000 tonnes of molybdenum, 125 tonnes of silver and 2 tonnes of gold over a twenty-year mine life (source: Brenda Mines website).

Troubadour's exploration team has worked diligently to define a 4 km long copper soil anomaly that is coincident with a historic trench that was reported in 1966 grading 0.87% copper over 125m⁽¹⁾. Over the intervening period from the 1960's, the area received limited exploration such that the trench was subsequently mislocated. The opportunity was lost until recent when the Company rediscovered the trench, acquired the surrounding ground and is now intent on unlocking its potential.
