PANCON RECEIVES FINAL PAYMENT FROM SALE OF ONTARIO PROPERTIES

Toronto, Ontario – December 31, 2021: Pancontinental Resources Corporation (TSXV: PUC) (“**Pancon**” or the “**Company**”) announces it has received the final payment in the amount of \$200,000 from Voltage Metals Inc. (“**Voltage**”) pursuant to a purchase agreement (the “**Agreement**”) dated June 20, 2020 as amended March 1, 2021, between the Company and Voltage, whereby the Company granted Voltage an option (the “**Option**”) to acquire 100% of the Company’s four mineral projects, St. Laurent, Montcalm, Nova and Gambler, located in Ontario, Canada (the “**Property**”). The Company confirms that the Option has been fully exercised and that Voltage now owns 100% interest in the Property.

In addition, the Company announces it has granted an aggregate of 3,730,000 options to purchase common shares (the “**Common Shares**”) in the capital of the Company exercisable at a price of \$0.20 per Common Share for a period of five (5) years to certain officers, directors, and consultants of the Company. The Common Shares issuable upon exercise of the options are subject to a four month hold period from the original date of grant.

About Pancon

Pancontinental Resources Corp. (TSXV: PUC) (OTCQB: PUCFF), or Pancon, is a Canadian junior mining company exploring the rich, underexplored Carolina Slate Belt in the southeastern USA. In January 2020, Pancon won the exclusive right to explore and purchase the former Brewer Gold Mine property, with an option period through October 2023. Between 1987-1995, Brewer produced 178,000 ounces of oxide gold from open pits that extended to 65-meter depths, where gold (Au) and copper (Cu) sulphides were exposed but could not be processed by the oxide heap leach operation. Pancon's 100%-owned, 1,960-acre Jefferson Gold Project nearly completely surrounds the 1,000-acre Brewer property. The Brewer-Jefferson area of interest, in Chesterfield County, South Carolina, is 12 kilometers along trend from the producing Haile Gold Mine, which produced 101,600 ounces of gold in the first half of 2021 (www.oceanagold.com). Brewer is a large, epithermal, high sulphidation gold-copper system driven by a sub-volcanic intrusive, possibly connected to a large copper-gold porphyry system at depth (Schmidt, R.G., 1978, The Potential for Porphyry Copper-Molybdenum Deposits in the Eastern United States, U.S. Geological Survey).
