

Resverlogix Announces Corporate Update Webcast and Conference Call

CALGARY, Alberta, Dec. 13, 2021 (GLOBE NEWSWIRE) -- Resverlogix Corp. ("Resverlogix") (TSX:RVX) today announced that they will be hosting a corporate update webcast and conference call on Thursday, December 16th, 2021 at 2:00 pm MST.

Webcast link: <https://services.choruscall.ca/links/resverlogix20211216.html>

Conference call information:

Canada/USA TF: 1-800-319-4610

Toronto Toll: +1-416-915-3239

About Apabetalone

Apabetalone (RVX-208), is a first-in-class, small molecule, therapeutic candidate with an epigenetic mechanism of action. It is a BD2 (bromodomain) selective BET (bromodomain and extra-terminal) inhibitor that works in preventing and treating disease progression by regulating the expression of disease-causing genes. Due to the extensive role for BET proteins in the human body, apabetalone, can simultaneously target multiple disease-related biological processes while maintaining a well-described safety profile – leading to a new way to treat chronic disease. Apabetalone is the only drug of its class with an established safety record in human clinical trials, with well over 4200 patient-years on drug across 10 clinical trials.

COVID-19:

On [March 23, 2020, Resverlogix](#) launched its COVID-19 program, enlisting world-renowned collaborators. Studies demonstrate that apabetalone has the potential to act against COVID-19 with a unique dual-mechanism: first by preventing viruses from entering the cells and replicating; and second by averting excessive inflammatory reactions that can cause severe and lasting organ damage. A [Phase 2 clinical trial](#) is evaluating apabetalone in combination with standard of care for patients hospitalized with COVID-19. The investigational treatment could potentially reduce the severity and duration of COVID-19. Apabetalone's unique dual-mechanism also means that it has the potential to show efficacy against new COVID-19 variants and may even help fight other viruses.

Resverlogix has partnered with EVERSANA™, the pioneer of next generation commercial services to the global life sciences industry, to support the rapid commercialization of apabetalone for COVID-19 in Canada and the United States. EVERSANA™ is currently leading clinical outreach and advocacy for apabetalone in the Canadian market.

Cardiology:

In February 2020, apabetalone became the first therapy of its kind to receive Breakthrough Therapy Designation by the US Food and Drug Administration (FDA) – for a major cardiovascular indication – following the ground-breaking findings from the BETonMACE Phase Three study. Data from BETonMACE showed apabetalone can potentially prevent major adverse cardiac events among high-risk cardiovascular disease patients who also have type 2 diabetes mellitus.

About Resverlogix

Founded in 2001, Resverlogix is a Calgary based late-stage biotechnology company and the world leader in epigenetics, or gene regulation, with the goal of developing first-in-class therapies for the benefit of patients with chronic disease.

Resverlogix is commercializing a new class of epigenetic therapies designed to regulate the expression of disease-causing genes. We aim to improve patients' lives by restoring biological functions – altered by serious illnesses such as cardiovascular disease – back to a healthier state.

The Company's clinical program is focused on evaluating the lead epigenetic candidate apabetalone for the treatment of cardiovascular disease and associated comorbidities, and COVID-19.

Resverlogix common shares trade on the Toronto Stock Exchange (TSX:RVX).

Forward Looking Statements:

This news release may contain certain forward-looking information as defined under applicable Canadian securities legislation, that are not based on historical fact, including without limitation statements containing the words "believes", "anticipates", "plans", "intends", "will", "should", "expects", "continue", "estimate", "forecasts" and other similar expressions. In particular, this news release includes forward looking information related to the Company's Phase 2 clinical trial for the potential treatment of COVID-19 patients with apabetalone (and potentially other viruses), cardiovascular disease and associated

comorbidities and other chronic diseases. Our actual results, events or developments could be materially different from those expressed or implied by these forward-looking statements. We can give no assurance that any of the events or expectations will occur or be realized. By their nature, forward-looking statements are subject to numerous assumptions and risk factors including those discussed in our Annual Information Form and most recent MD&A which are incorporated herein by reference and are available through SEDAR at www.sedar.com. The forward-looking statements contained in this news release are expressly qualified by this cautionary statement and are made as of the date hereof. The Company disclaims any intention and has no obligation or responsibility, except as required by law, to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.
