ABOUT DISCOVERY METALS

Discovery Metals is focused on discovering and advancing high grade polymetallic deposits in a recently assembled land package of approximately 300,000 hectares over a large and historic mining district in northern Coahuila State, Mexico. The portfolio of seven key properties, all with shallow high-grade silver-zinc-lead mineralization, is situated in a world-class CRD (carbonate replacement deposit) belt that stretches from southeast Arizona to central Mexico. The land holdings contain numerous historical direct-ship ore workings and, in some cases, significant underground development. No modern exploration or exploration drill testing has been carried out on the properties prior to Discovery’s time on the projects.
