VIZSLA RESOURCES COMPLETES EXPLORATION AT THE KATHLEEN MOUNTAIN PROJECT IN SOUTHWESTERN BRITISH COLUMBIA

December 14, 2018: Vancouver, BC – Vizsla Resources Corp (the “Company” or “Vizsla” (TSX-V:VZLA)) is pleased to announce that the Phase 2 exploration program has been completed at the Kathleen Mountain exploration project (“the Project”).

The program consisted of a geochemical soil sampling program, a 3-Dimensional Induced Polarization Survey and a Ground Magnetic Survey. A total of 1073 soil samples were collected and subsequently analyzed by Bureau Veritas. The geophysical survey was carried out by SJ Geophysics Ltd. on a grid coincident with the soil sampling grid.

The Kathleen Mountain project is located 50 km northeast of Princeton in the Similkameen Mining Division of B.C. The primary exploration target on the Kathleen Mountain property was a calc-alkalic porphyry molybdenum copper deposit similar to the Brenda Mines deposit located about 13 km northwest of the property.

Vizsla’s President and CEO, Michael Konnert stated, *“Vizsla is pleased to have completed the second phase of our exploration program on the Kathleen Mountain project. Although the results weren’t overwhelmingly positive, we have improved our understanding of the property’s potential and will assess our next steps including project acquisitions”*

The results of the 2018 soil survey indicate that the most prospective of the mineral concentrations is a previously undiscovered soil anomaly located north-northwest of the previously discovered Golden Lode showing.

SJ Geophysics produced Inversion models (3D) for resistivity and chargeability. The resistivity characteristics highlighted three zones of distinct resistivity that most likely map the contact between the Pennask and the Osprey Lake batholiths. The inverted chargeability models indicated that the chargeable values were quite small with no significant anomalous features.

Property Details:

The property is located in the Interior Plateau belt of central BC and is underlain by three intrusive bodies: 1) the late Triassic/early Jurassic Pennask batholith occupies the northern half of the property; 2) the mid Jurassic Osprey Lake batholith occupies the southern half of the property; and 3) the Eocene Otter bodies intrude the Pennask batholith in the northern portion of the property.

Phase 1 exploration on the property located two historic showings of interest; the Golden Lode showing, discovered in 1928 and the Kathleen Mountain showing, discovered in 1947. Historical exploration in the vicinity of the claims was for porphyry deposits in the early 1950s and 1960s, at the time of early development of the Brenda Mines, located 15km to the north.

Qualified Person and Quality Assurance/Quality:

The scientific and technical disclosure contained in this news release has been reviewed and approved by Christopher I. Dyakowski, PGeo, a qualified person as that term is defined in National Instrument 43-101 -- Standards of Disclosure for Mineral Projects.

About Vizsla Resources: Vizsla is a mineral exploration company that is engaged in the business of the acquisition, exploration and development of mineral resource properties. The Company's first project and core asset is the Kathleen Mountain Property in British Columbia. Vizsla's common shares trade under the symbol "VZLA" on the TSX-V.

Cautionary Note Regarding Forward-Looking Statements

This news release contains "forward-looking information" within the meaning of applicable Canadian securities legislation. Such forward-looking statements and information herein include but are not limited to statements regarding the trading of Vizsla's common shares on the TSXV, the intended use of the proceeds of the IPO and the exploration of the Kathleen Mountain Property. Vizsla does not intend to, and does not assume any obligation to update such forward-looking statements or information, other than as required by applicable law.

Forward-looking statements or information involve known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of Vizsla and its operations to be materially different from those expressed or implied by such statements. Such factors include, among others legislation, taxation, controls, regulations and political or economic developments in Canada; financial risks due to precious and base metals prices, operating or technical

difficulties in mineral exploration, development and mining activities; risks and hazards of mineral exploration, development and mining; the speculative nature of mineral exploration and development, risks in obtaining necessary licenses and permits, and challenges to Vizsla's title to properties.

Forward-looking statements are based on assumptions management believes to be reasonable, including but not limited to: the continued operation of Vizsla's exploration operations, no material adverse change in the market price of commodities, and such other assumptions and factors as set out herein.

Although Vizsla has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements or information, there may be other factors that cause results to be materially different from those anticipated, described, estimated, assessed or intended. There can be no assurance that any forward-looking statements or information will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements or information. Accordingly, readers should not place undue reliance on forward-looking statements or information.
